

## 3 Automations Every E-Commerce Store Needs

---

### 01 Abandoned Cart Recovery

Someone left without buying – that's a warm lead, not a lost sale.

// HOW IT WORKS

1. Customer adds items to cart but doesn't complete checkout
2. 1hr later: friendly reminder email with a link back to their cart
3. 24hrs later: follow-up with social proof or a small incentive
4. 72hrs later: final nudge – then the sequence ends cleanly

---

### 02 Post-Purchase Review + Upsell Flow

Your best leads are people who already bought from you. Automate the relationship.

// HOW IT WORKS

1. Order is confirmed – thank you email sends immediately
2. Day 5: automated review request with a direct link
3. Day 10: product recommendation email based on what they bought
4. Sequence ends – repeat buyers and reviews build on autopilot

---

### 03 Back-in-Stock Alerts

Customers who wanted a sold-out item are your most motivated buyers.

// HOW IT WORKS

1. Customer clicks 'notify me' on a sold-out product page
2. Their email is captured and stored automatically
3. When inventory is updated, alert fires to everyone on the list
4. They land directly on the product page ready to buy

---
